1. Signup for OneLogin
2. Adding Adaptive Insights to OneLogin
3. Setting up Single Sign-on
4. Mapping Adaptive Insights to Users
5. Adding Your Directory

1. SIGN UP FOR ONELOGIN

OneLogin is the smart and simple way to eliminate passwords and automate user management for Adaptive Insights!

1.1 If you don't already have OneLogin, start by navigating to the OneLogin homepage and proceed to the OneLogin free trial at <https://www.onelogin.com/signup>. At this point, you should be re-directed back into your account and have selected a password. Once you're within your OneLogin account, let's get started on setting up Adaptive Insights.

2. ADDING ADAPTIVE INSIGHTS TO ONELOGIN

2.1 To add Adaptive Insights to your OneLogin account, start at your dashboard portal and proceed to **Apps > Add Apps** and search for 'Adaptive Insights'. There will be only one connector, so go ahead and select that and when you're in the configuration page, select **Save** to add Adaptive Insights to your OneLogin account.

3. SETTING UP SINGLE SIGN-ON

3.1 Immediately you will be brought to the Adaptive Insights **Info** tab. Proceed instead to the **Parameters** tab. Here ensure that **Credentials** are 'Configured by admin', and that both the **Email** and **NameID (Subject)** fields are set to 'Email'. Completed, your page should resemble the example below, so go ahead and select Save to confirm your settings.

Info Configuration **Parameters** Rules SSO Access Users Mobile

Credentials are

Configured by admin
 Configured by admins and shared by all users

Adaptive Insights Field	Value
Email	Email
NameID (Subject)	Email

3.2 Next, navigate over to the SSO page. Here you'll be copying down both the **Issuer URL** and the **SAML 2.0 Endpoint**. Then, proceed to 'View Details' under the associated X.509 Certificate to view that certificate's page. Select the **X.509 PEM** format, and then **Download** to acquire the certificate. The certificate and both URL's will be placed within the Adaptive Insights dashboard to confirm the SAML SSO connection.

Assumed Sign-In Allow assumed users to sign into this app
 When enabled, admins who assume users can sign into this app with their identity. This setting can only be changed by the account owner. Note that the account owner can also completely disable the assume feature under Account -> Settings.

Single Sign On

Sign on method
SAML2.0

X.509 Certificate
Default Certificate 1 (2048-bit)
[Change | View Details](#)

Issuer URL
https://app.onelogin.com/saml/metadata/400310

SAML 2.0 Endpoint (HTTP)
https://app.onelogin.com/trust/saml2/http-post/sso/400310

SLO Endpoint (HTTP)
https://app.onelogin.com/trust/saml2/http-redirect/slo/400310

3.3 Now, move into your organization’s Adaptive Insight account. Within the upper left configuration menu, navigate to **Admin > Manage SAML SSO Settings**, under **Users and Roles**.

3.4 Begin by naming your SAML connection, and then upload the .PEM certificate by selecting **Choose File**. Under **Enable SAML**, select ‘Allow SAML SSO and direct Adaptive Insights login’, and then proceed to fill out the rest of the page with the information on the left. Finally, copy down the account ID (*saml/sso/YOUR ACCOUNT ID*) from your **SSO URL** at the bottom of the page. When completed, your page will resemble the example below, so go ahead and select **Save** to confirm your settings.

Here’s a quick list of the information you’ll be needing within the SAML SSO section:

- Identity provider Entity ID
- OneLogin Issuer URL
- Identity provider SSO URL
- OneLogin HTTP Endpoint
- SAML user id
- User’s Adaptive Insights user name
- SAML user id location
- SAML NameID format: unspecified

SAML Configuration * Required

SAML version: 2.0

* Identity provider name: OneLogin

* Identity provider Entity ID: https://app.onelogin.com/saml/metadata/400310

* Identity provider SSO URL: https://app.onelogin.com/trust/saml2/http-post/sso/400310

Custom logout URL: [Empty]

* Identity provider certificate: Choose File (no file selected)
 Issuer: CN=OneLogin Account 38758, OU=OneLogin IdP, O="Capozzi ", C=US
 Validity: Thu Feb 20 18:11:07 PST 2014 - Thu Feb 21 18:11:07 PST 2019

* SAML user id: User’s Adaptive Insights user name
 User’s federation id

* SAML user id location: User id in NameID of Subject
 SAML NameID format: Unspecified
 User id in Attribute: SAML attribute [Empty]

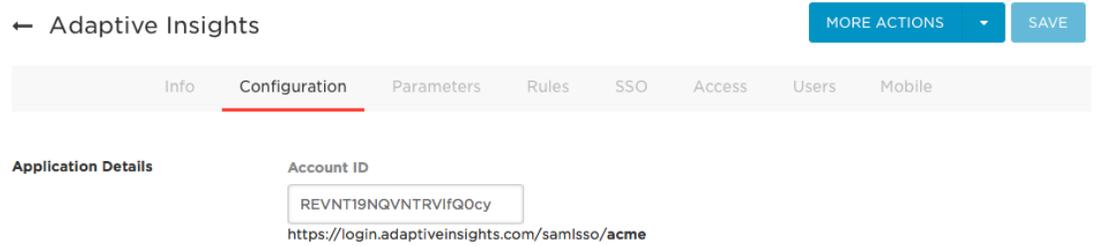

Enable SAML

* Enable SAML: Not enabled
 Allow only SAML SSO
 Allow SAML SSO and direct Adaptive Insights login

SSO URL: Adaptive Insights SSO URL: https://login.adaptiveinsights.com:443/saml/sso/REVNT19NQVNRTRVfQ0cy

Save Cancel

3.5 With the **Account ID** retrieved from Adaptive Insights, proceed back into OneLogin and proceed to **Apps > All Apps > Adaptive Insights**, and within the **Configuration** tab, place it within the **Account ID** field. When completed, your page will resemble the example below, so then go ahead and select **Save** to confirm your settings.

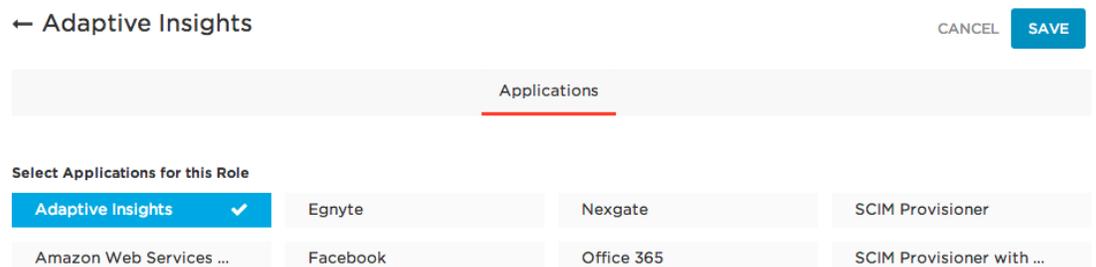

And with this, OneLogin should be successfully connected with Adaptive Insights through SAML!

4. MAPPING ADAPTIVE INSIGHTS TO USERS

With SAML successfully enabled and single sign-on properly configured, lets allocate Adaptive Insights to a group of users.

Roles are the key component of OneLogin that grant users access to an application. In many cases, Roles are linked to a security group in the corporate directory and members of that group are then granted access to apps in OneLogin.

4.1 Proceed to **Users > Roles > New Role** and give your role a name and associate it with Adaptive Insights. For simplicity I will use a Role named "Adaptive Insights" and the Security Group named "Adaptive Insights" in Active Directory.

4.2 Now with the Role established, lets generate a custom mapping that will assign the the Role of Adaptive Insights to everyone within the Group of Adaptive Insights. Proceed to **Users > Mappings** and, seeing as we have no mappings that includes Adaptive Insights, go ahead and select **New Mapping**.

4.3 In the **Custom Mapping** page, you can name a mapping and give it actions, and a condition to execute that action; here we're making a simple group for Adaptive Insights, a Role we've generated to give a group of users Adaptive Insights based on their active directory grouping. When you've created your mapping, select **Save** to proceed.

← Adaptive Insight Mapping

CANCEL **SAVE**

Conditions +

MemberOf ▼ contains ▼ Adaptive Insights -

Actions +

Set role ▼ Adaptive Insights ▼ -

4.4 Note how when the **Condition** = Memberof > Contains > Adaptive Insights, **Perform these actions** = Set role > Adaptive Insights, it's saying that 'Anytime a user is a member of the group Adaptive Insights, set their role to 'Adaptive Insights'. Mappings are flexible, so tailor them to your personal user situations.

4.5 You can always check what users are going to be affected by your mapping by selecting **More Actions > Preview All Mapped Users** or **Preview All Mapped Users**.

4.6 Once you're back in the Mappings page, select **Reapply All Mappings** to confirm and refresh the mapped entitlements to all users.

At this point, you and your users should have full access to Adaptive Insights and be able to log in to their accounts via single sign-on!

5. ADDING YOUR DIRECTORY

OneLogin easily integrates with all major user and corporate directories, and linking them to your accounts is incredibly easy.

5.1 Start by going to **Users > Directories** to select the directory you wish to integrate and then select it.

 <p>Active Directory Install OneLogin's Active Directory Connector, which synchronizes users in real-time and enables authentication against AD. All communication is done over outbound SSL and does not require firewall changes.</p>	 <p>Google Apps Users are periodically synchronized during the day and users are authenticated against Google Apps using their Google password.</p>	 <p>LDAP via SSL Authenticate users against any LDAP server using LDAP or LDAP/SSL. Synchronize users from LDAP into OneLogin.</p>
 <p>LDAP via Connector Install OneLogin's LDAP Connector, which synchronizes users in near real-time and enables authentication against LDAP. All communication is done over outbound SSL and does not require firewall changes.</p>	 <p>Workday Use Workday as your system of record for employees. Users are periodically imported into OneLogin.</p>	 <p>Workday Custom Reports - Beta Use Workday as your system of record for employees. Users are periodically imported into OneLogin via Workday's Custom Reports.</p>

5.2 Each directory has its own workflow and such things are detailed elsewhere. Here are some links to helpful articles detailing how to configure your directory:
