

## Accelerate Your Cloud-First Strategy With Concur and OneLogin

OneLogin for Concur enables organizations to easily connect their internal corporate directories to Concur and synchronize users in real-time. Employ single sign-on (SSO) at the office and on-the-go, and enforce multi-factor authentication based on your unique security policies. IT gains control over application access and users get one-click access to Concur Invoice, Expense, Travel, and all other apps

### Instant On

OneLogin is entirely cloud based and allows you to get up and running in minutes. No software to install, no appliances, no firewall changes.

### Single Sign-On

OneLogin signs users into Concur via the standards-based SAML 2.0 protocol which uses digital signatures to establish trust between OneLogin and the app. SAML SSO eliminates user-managed passwords and can mandate that app access is only granted when it's in accordance with your organization's own authentication policies.

### Multi-Factor Authentication

Multiple authentication factors provide an extra layer of protection so attackers can't gain access to your data by simply guessing a user's password. Use OneLogin's free mobile one-time password (OTP) smartphone app or a pre-integrated third-party solution from RSA, SafeNet, Duo Security, Symantec or VASCO.

### Mobile Identity

OneLogin Mobile offers full-function access to web apps with a secure, flexible solution that supports on-the-go users while eliminating enterprise risk. A single click is all it takes to access Concur alongside all other apps — in the cloud and behind the firewall.

### Real-Time User Directory Integration

OneLogin's Active Directory Connector can be installed in minutes and syncs users in your directory to Concur and all additional apps. Integrate with AD, LDAP, G Suite, your HRIS, or use OneLogin as your primary directory in the cloud. Multiple directories become one unified directory, giving IT an effective user kill switch when users leave the organization and app access must be terminated.

### Security & Availability

OneLogin supports complex directory infrastructures for some of the most demanding public companies in the world. Rest easy with redundant data centers, redundant DNS, DDoS protection, quarterly security reviews by ISEC Partners, and 24/7 monitoring. 99.9% uptime guarantee.
