

KINDLING AND ONELOGIN PUT IDENTITY FIRST

OneLogin for Kindling enables firms to easily connect their internal directories, enjoy single sign-on at the office or on the go, and enforce multi-factor authentication.

SINGLE SIGN-ON

OneLogin uses SAML 2.0 to sign users into Kindling. The standards-based SAML protocol uses digital signatures to establish trust between the identity provider and the application, eliminating user-managed passwords and the risk of phishing. SAML can also mandate that users only get access after having been authenticated by OneLogin using your organization's own authentication policies.

ACTIVE DIRECTORY AND LDAP INTEGRATION

OneLogin's Active Directory Connector can be installed in minutes with no server restarts or firewall changes required. Visually select one or more organizational units (OU) to import users from Active Directory and you're all set. OneLogin synchronizes users in real time, which provides IT with an effective user kill switch for when users leave the organization.

that do often only provide a reduced feature set. OneLogin for iPad changes all that. Now a single click is all it takes to access your web apps — in the cloud and behind the firewall.

MULTI-FACTOR AUTHENTICATION

Multiple authentication factors provide an extra layer of protection so that criminals can't get access to your data by just guessing a user's password. Use OneLogin's smart phone app or a pre-integrated third-party solution from RSA, SafeNet, Symantec or VASCO.

SECURITY & AVAILABILITY

OneLogin supports complex directory infrastructures for some of the most demanding public companies in the world. Rest easy with redundant data centers, redundant DNS, DDoS protection, quarterly security reviews by iSEC Partners, and 24/7 monitoring. 99.99% Uptime Guarantee.
