

OneLogin Mobile Cloud Apps on the Go

Enterprises benefit tremendously from cloud applications, but often lack good mobile options. Many web applications don't have a native mobile version and the ones that do often provide only a reduced feature set. OneLogin for mobile changes all that. Now a single click is all it takes to access your web apps – in the cloud and behind the firewall.

FULL WEB EXPERIENCE

OneLogin Mobile gives users the full web experience that they are used to from their web apps. Users no longer have to settle for a subset of the functionality when they are on the go.

CONVENIENT ONE-CLICK ACCESS

Signing into web applications on mobile used to be a cumbersome process that could easily take up to a minute. OneLogin Mobile makes signing in a breeze. Just enter your PIN, tap on the desired app and you're in!

SECURE MULTI-FACTOR AUTHENTICATION

OneLogin Mobile enforces the same authentication policies as the web interface. Multiple authentication factors adds a significant layer of protection to your cloud data. Use OneLogin's free Mobile OTP for smartphones or any of the pre-integrated third-party solutions from RSA, Symantec, VASCO or Yubico.

DIRECTORY INTEGRATION

Users can sign into OneLogin Mobile with their existing network credentials from Active Directory or LDAP, which means fewer support tickets and higher productivity.

ACTIVE APP LIST

OneLogin Mobile keeps apps active inside the iOS app itself, which makes it easy to switch between apps. And OneLogin's portal is never more than one click away.

DOWNLOAD IT FROM THE APP STORE

OneLogin Mobile is available on the iTunes App Store for free and can even be used with OneLogin's Free Plan, which provides directory integration and single sign-on for up to three apps for an unlimited number of users.

ERIC AHLM, GARTNER, INC. SAYS...

Mobile device management (MDM) has done a good job of securing the first wave of mobile devices entering the workforce, but can often fall short in providing capabilities that secure the applications themselves. We are seeing a trend of companies struggling with the 'next app' phenomenon asking Gartner how to secure a broader set of applications on mobile platforms beyond email.
