

Monitor and Secure your Hybrid Cloud Environment with OneLogin Identity Insights for Amazon EventBridge

OneLogin and Amazon EventBridge make it easy for security and operations teams to gain critical visibility across their hosted virtual infrastructures and to build smarter, automated security workflows.

Amazon EventBridge is a serverless event bus service that makes it easy to connect your applications with data from a variety of sources. OneLogin's purpose-built Identity and Access Management (IAM) integration enables enterprises to leverage identity insights, monitor activities, alert on threats and execute event-based workflows across their hybrid environment using services like AWS CloudWatch, Lambda, and AWS Step Functions.

ONELOGIN FOR AMAZON EVENTBRIDGE

Capture identity access events inside AWS

Combine Identity Insights with other AWS events

Auto-trigger alerts on suspicious user behavior

Automate user on- and offboarding

ORCHESTRATE INTELLIGENTLY WITH REAL-TIME IDENTITY ALERTS AND MONITORING

Real-time threat monitoring and response

Security events require immediate attention. Flag potential threats in real-time by streaming OneLogin's robust collection of actionable identity events, such as when and how users log into corporate apps, to AWS services.

Trigger notifications and actions

Build timely alerts and responses when account compromise is suspected. For example, trigger an alert or security workflow if OneLogin detects suspicious user behavior, such as a high risk login or multiple failed authentication requests across a company's suite of corporate applications.

Automate user on/offBoarding to AWS

Easily trigger workflow activities for provisioning and deprovisioning user access to AWS. For example, terminate ongoing live sessions, invalidate API access keys and transfer ownership of resources when an AWS user is offboarded.

Strengthen compliance

Provide unified compliance reporting that details all application access within and outside of AWS infrastructures by user. Ensure least privilege controls persist and easily pull data for audits.

Holistic view of your environment

Integrate any of OneLogin's comprehensive set of user identity and access events into AWS. Combine with native events from AWS and other integrated solutions for a comprehensive, holistic view of your environment so you can react to potential security threats immediately.

Cloud-native capabilities

Active monitoring is not a static project. The nimble nature of a cloud-native infrastructure of OneLogin and AWS, where no software component is installed, provides the foundation for an agile approach to security monitoring.

PROTECT CORPORATE DATA WITH REAL-TIME INSIGHTS AND AUTOMATION

Stream OneLogin JSON Events to Amazon EventBridge to Power Orchestrated Workflows
