

OneLogin Partner Implementation Certification Training

1

Overview

The OneLogin Partner Certification Training is designed solely for the purpose of OneLogin Partners performing implementations on OneLogins behalf. There are four steps in receiving the Partner Implementation Certification Training:

1. Classroom Training
2. Configuring a Sample Use Case
3. Shadowing OneLogin Professional Services
4. Performing an implementation and being reviewed by OneLogin Professional Services.

Classroom Training

The OneLogin Administrator Essentials course explores the foundational concepts of the OneLogin Platform. It will provide in-depth instruction and exercises designed to help reinforce platform concepts in the course of an implementation.

Common Implementation Use Case

Provided with a sample SOW & OneLogin setup, you will configure OneLogin according to customer requirements.

Shadow Professional Services

Shadowing OneLogin Professional Services provides strategies and best practices during an implementation. You will learn the best way to educate your customer on project timelines and requirements to ensure a successful implementation.

Customer Implementation

A real OneLogin customer implementation will be assigned to you to complete. OneLogin Professional Services will monitor your progress to ensure that the implementation is performed successfully according to the customer requirements while meeting OneLogin's brand and guidelines.

Who Should Attend

- Partners who wish to perform OneLogin implementations.
- Project Managers and key stakeholders who would like an in-depth knowledge of the OneLogin Platform.

Prerequisites

- Students must have created a OneLogin Developer Account.

Delivery Format

- In class private
- Virtual private

Setup Requirements

- Students will bring their own laptops to use in class
- OneLogin will provide a virtual machine for use during class.
- Microsoft Office 365 Licenses
- G Suite Licenses
